

HEAT EXCHANGER HAVING AN IMPROVED BAFFLE

5

ABSTRACT

- There is disclosed a heat exchanger for transferring heat between at least two fluids and a method for forming the heat exchanger. The heat exchanger preferably includes one or more end tanks, one or more inlets and outlets, one or more tubes, one or more fins, one or more bypasses, one or more improved baffles combinations thereof or the like.
- 10

The improved baffles act as a baffle system, with advantages over multiple-piece double baffle system due to being assembled in one piece.
